Leaked Credentials Monitoring

Proactively identify compromised corporate or customer credentials to prevent Account Takeover (ATO) attacks.

Quickly identify and take action on compromised accounts to mitigate Account Takeover (ATO) attacks. We deliver real-time monitoring of leaked login credentials across various internet sources, including the most hidden deep and dark web communities.

Capabilities

Corporate Credentials Monitoring

Monitor your employee email addresses with the company domain/subdomain or subsidiary company domains to flag accounts, reset passwords, and restrict permissions to prevent actors from accessing confidential or personally identifiable information. We deliver alerts via email, API, or SFTP about all newly identified credentials related to their monitoring list.

Complete Credentials Monitoring

Monitor your client accounts for compromise to keep accounts secure and prevent misuse. Gemini matches your hashed email address lists against our hashed database to identify compromised accounts and provide alerts on newly identified matches.

Gemini's Edge

Our experienced team of multilingual analysts has been embedded for years and possesses intimate knowledge of the underground economy, as well as experience engaging with criminal actors, giving us unparalleled insight and access to dark web data.

As a result, Gemini can provide not just data exposed in large public breaches, but also smaller unreported incidents. More than 90% of our data is retrieved from the most hidden parts of the criminal underworld by our world-class operatives.

Key Benefits:

- Quickly detect compromised accounts to take immediate action and minimize future incidents.

- Automate monitoring to provide protection at scale.

- Gain access to the broadest available data, including not just publicly known breaches, but also smaller, unreported incidents.
